Contact: [+91 9967692697](tel:+919967692697) | Email: nawabrahil@gmail.com

Skills:

AWS, GCP, GKE, Kubernetes, Terraform, Docker, Helm, ArgoCD, Shell Scripting, Git, Github, Istio mesh, Bitbucket, Jenkins, New Relic, Grafana, Kibana, IAM

Experience:

Software Engineer

Sep 2024 to present

Lowe's India - Bengaluru

- Oversaw 100+ GKE Standard clusters (20+ production) to deliver a multi-tenant Kubernetes platform at enterprise scale.
- Implemented an active-active, multi-region HA environment on GKE using paired clusters in us-east4 and us-central1; leveraged Google Cloud Load Balancing for cross-region traffic distribution and applied weighted DNS-based routing to enhance resilience and reduce latency.
- Executed Kubernetes upgrades from 1.28 to 1.32 using blue-green and in-place node-pool strategies, ensuring zero-downtime rollouts with rapid rollback capability.
- Standardized deployment of GKE add-ons (Gatekeeper, Cert-Manager, Istio, NGINX Ingress, External Secrets, KEDA, Goldilocks, Velero, Wiz) to enforce policy, strengthen security posture, optimize autoscaling, and streamline backup/DR.
- Hardened access controls using GCP IAM best practices (least privilege, audit logging, service-account governance) and enforced org-level policies across projects.
- Reduced compute costs by shifting non-critical workloads to Spot/Preemptible pools while reserving on-demand capacity for SLO-critical Pods, governed by taints/tolerations and node affinity rules.
- Built Grafana dashboards for core infrastructure metrics and configured proactive alerts, improving incident detection and response time.
- Accelerated platform development using ChatGPT Enterprise for kubectl/Helm/Terraform automation, log analysis, and PR summarization through secure, long-context sessions.
- Utilized Windsurf (Cascade) to auto-generate Python utilities for safe GKE operations (scaling, relabeling, cleanup), cutting remediation time during incidents.

Associate Consultant

Mar 2021 to Sep 2024

Capgemini - Mumbai

- Served as Deployment Reliability Engineer for McDonald's Corporation, driving high-availability, automated deployment pipelines across Kubernetes and AWS.
- Managed canary deployments of Java microservices across self-hosted Kubernetes (via Kops) and Amazon EKS clusters integrated with Istio service mesh for secure traffic management.
- Executed deployments using Jenkins, with Terraform for infrastructure provisioning and Helm for microservice releases.
- Deployed and managed AWS components including Lambda, API Gateway, OpenSearch, Amazon MSK, and DynamoDB, ensuring scalability and reliability across distributed systems.
- Used CloudWatch Logs Insights to perform log analytics, accelerating incident resolution.
- Automated repetitive operational tasks via shell scripting to enhance efficiency and reduce manual intervention.
- Designed end-to-end CI/CD pipelines in Jenkins, enabling consistent, reliable software delivery.
- Monitored microservices and AWS workloads using New Relic, improving visibility and proactive issue detection.
- Reduced production incidents by over 90%, achieving higher uptime and system reliability.
- Led knowledge-transfer sessions to train new engineers and standardize deployment practices across teams.

Education:

Mumbai University - Mumbai

B.E. Electronics Engineering; CGPA: 6.86

2016-2020

Certifications:

- | | |
|---|----------------------|
| • AWS CCP - Certified Cloud Practitioner | Sep 2022- Dec 2026 |
| • CKA - Certified Kubernetes Administrator | July 2023- July 2026 |
| • AWS SAA-C03 - AWS Certified Solutions Architect - Associate | Dec 2023- Dec 2026 |
| • HashiCorp Certified: Terraform Associate 003 | July 2024- July 2026 |
| • Google Cloud Certified Associate Cloud Engineer | Jan 2025 - Jan 2028 |

Awards & Achievements:

- Xtra Mile Award for Q3 2022 (Capgemini) : Awarded for commitment, efficiently owning critical tasks, proactive issue prevention, and driving strategic initiatives in the right direction.
